

Building for you...building for the planet

Green Building Envelope and Energy Efficient Experts

Are you starting a new construction project, or restoring or renovating an existing building? We can help with energy saving products and ideas.

- Air Barriers
- Water Barriers
- Energy Efficient Windows
- Energy Efficient Doors
- Continuous building envelope insulation
- US Department of Energy's best rated exterior cladding for energy efficiency
- Conventional-looking wall claddings like stone and brick
- Increase square footage of your design without increasing the footprint

What does this mean?

We're helping to conserve our natural resources. By using "green" products, we're using our energy and water more wisely. As the consumer, you receive improved indoor air quality throughout your home. We're making repairs in such a way that create healthy buildings while reducing unhealthy environmental impacts. While these repairs are the right thing to do for the environment, it's also easier and less costly for you, the homeowner, to maintain.

Always remember the three main benefits to "going green":

- More healthy
- Less costly
- Longer lasting

Decreasing your project's carbon footprint, saving energy, and satisfying the client, all without breaking the bank. Call today for your consultation at **1.800.896.6181** or visit us on the web at **www.usexterior.com** and click on "Building Green."
